

Oto for Clinicians

Oto for Clinicians allows healthcare providers to easily capture, view, and share high-quality, magnified images of the tympanic membrane for clinical collaboration and patient engagement, medical education, and workflow integration in a HIPAA compliant environment.

PROBLEM:

With a traditional otoscope, conditions of the ear are not documentable, are only viewable in real time, and lack engagement between clinician and patient.

SOLUTION:

Oto for Clinician promotes clinical collaboration, patient interaction and utilizes iPhone® ingenuity for HIPAA compliant documentation.

RESULTS:

Consistent visual communication between clinicians and patients to reach an accurate diagnosis.

PRODUCT OFFERING

#1455 - Oto for Clinicians

Contents:

“

The Oto makes explaining to parents a once 'intangible diagnosis a thing of the past. With its superior digital magnification and image capture, parents can now better appreciate the art of the ear examination."

- Dr. Robert Quillin, Pediatrician

”

“

I love the ability to access a medical grade app on the iPhone to show people what their ear looks like during their visit. It's a great tool for physicians, physician training and patient education.

- Dr. Jonathan Kahn, Otolaryngologist
